

Optiline™

OPTILINE DRENCHER - MAKING DRENCHING QUICK AND ACCURATE

The Optiline™ drencher offers a superior drenching experience via

- ergonomic design
- animal welfare awareness
- patented technology
- customised thinking

Ergonomic design

After an exhaustive development process, the Optiline drencher can offer you the chance to drench more animals per hour with less operator stress and fatigue compared with current drenching equipment.

This is thanks to a revolutionary design providing superior control while drenching, a better balance and heightened operator sensitivity throughout the job. Importantly, the Optiline drencher has been endorsed by farmer trials in Australia and New Zealand.

Animal welfare awareness

Throughout the research and development process, animal welfare was front of mind. The oral insertion process had to be tailored

- to minimise the chance of thrusting the nozzle too far down the animal's throat (hence the mouth guard)
- to allow left or right handed operators the same wide range of adjustment to ensure maximum comfort for both sheep and user (hence the fully rotating nozzle)

Patented technologies

The Optiline drencher features cutting edge-technology aimed at saving operators time and money. First is the dosage lock – when the desired dosage rate is set and the lock is clicked to deliver a consistent amount, the wrong dose can't be given. And money won't be thrown away.

The latest patented valve technology means the Optiline drencher is easily primed to ensure no wasted product. No air bubbles in the tube or delivery system give consistent dosing and delivery of ZOLVIX® – what is set is what the animal gets.

Customised thinking

Comfortable, quick, accurate, animal-friendly and easy to use – not the words normally associated with drenching animals. But Optiline's ergonomics, angle of approach and user-friendly design make it a breakthrough in drenching systems.

Accurate dosing means accurate and efficient deployment of labour. It's all part of the Optiline service.

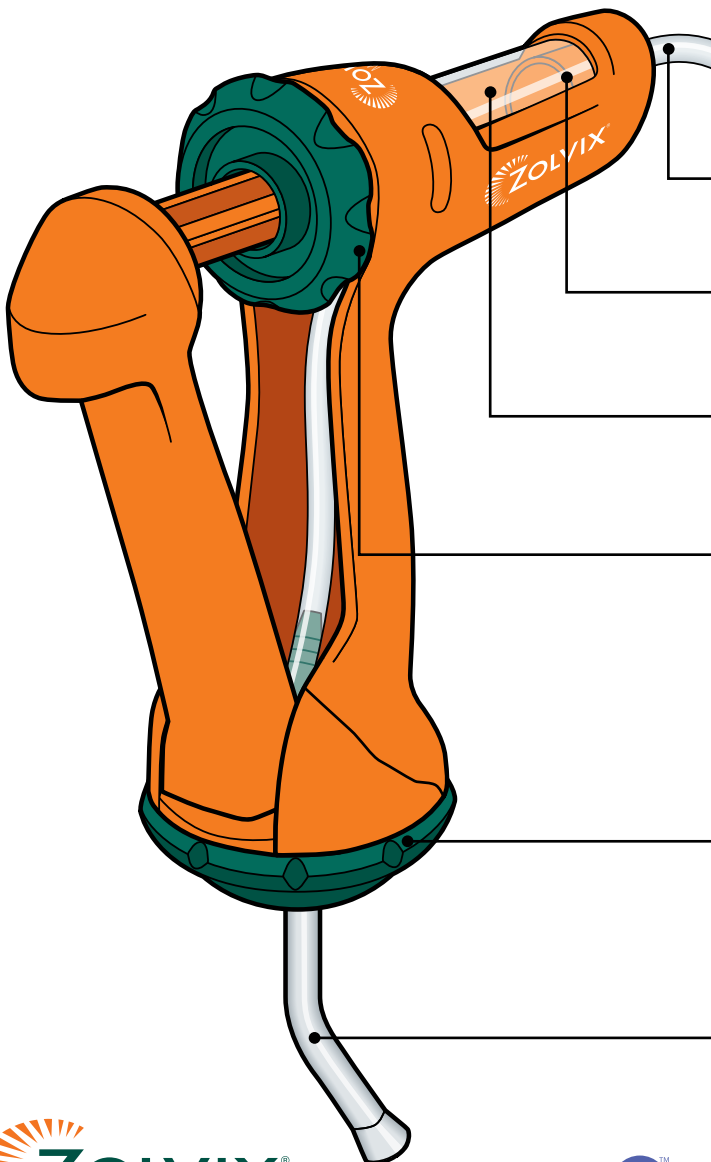

This revolutionary new drencher from Novartis Animal Health was developed in close collaboration with the innovative drenching specialists, Simcro Tech Limited.

Optiline™ DRENCHER

Part of the ZOLVIX
Optimum™ System

TAKING THE DRUDGERY OUT OF DRENCHING

Breakthrough design

- Superior drencher control – more balanced
- Hand closer to animal
- Superior operator comfort
- Greater comfort for both animal and operator
- Reduced physical fatigue for operator – less reach
- Allows for reduction in drenching times

Barb connection

- Allows for easier attachment
- Creates firm connection
- Less chance of fall-offs

Patented valve technology

- Easy to prime – less wasted time
- Less chance of drips
- Bubble reduction technology

High visibility window

- Allows operator to see product
- Ideally located for easy view

Patented dosage lock

- No tools required
- Auto-locking dose guard
- Consistent dosing
- Unable to be accidentally altered

Precise & accurate

- Correct product use
- Product efficacy
- Guaranteed 97% accurate

Mouth Guard

- Big bulbous design
- Minimal risk of animal mouth and throat trauma
- Balanced design

Versatile nozzle

- Easy to change
- Able to re-orientate for operator
- Two sizes - lambs and sheep
- Improved product administration
- Free flowing nozzle
